Competences

English (B2), teamwork, creative and quick adaptation to change. Strategic planning, stress management, leadership and initiative.

I consider myself self-taught, a fast learner and enjoy the process.

Experience

Sitios y Web, Developer of web applications

AUGUST 2021-NOVEMBER 2022, PUEBLA

I started with front-end related projects (**HTML, CSS and Bootstrap**). My creativity and experience using design software (Photoshop, Figma and Blender) helped me to complement the design of the web application.

Soon after I was working with **PHP** and **MySQL**. Providing support and maintenance to systems previously created by the company and making **queries in the cloud, file management, CRUD, forms and advice with customers** who do not understand the backend. All this with the approval of the team.

Formula 1, Project Manager

SEPTEMBER 2022-OCTOBER 2022, MEXICO CITY

My team and I were responsible for the definition, planning and execution of the Mexico GP, for which we were in charge of coordinating the tasks and assuming a leadership role. We were able to handle stressful moments and provide support to both local and foreigners at the time of the event.

BNN Mexico, Web developer

DECEMBER 2022-MAY 2023, MEXICO CITY

My way of participating was to complement all areas of the agency to adapt it to the web. We would create a site or an application, maintained by Javascript, PHP, Node.js or Python. My work was more front-end oriented but at certain times I was involved in the whole application.

Freelance, Developer of web applications

NOVEMBER-2022- CURRENTLY, PUEBLA

After almost a year and a half working for an agency, I decided to focus on learning a **Javascript** library (**React**) and a **Python** framework such as **Django**.

I took the reins of my project and personal brand, offering my services to small and medium companies that still didn't have a web presence or systems to help them manage their business.

University

Meritorious Autonomous University of Puebla, Engineer of Computer Science

2019-2024, PUEBLA

The university gives me the flexibility to accommodate my subjects as best suits me, motivating us to start our personal project or third party projects. Avoiding abandoning the career, but implementing everything studied to see it in real projects.

I have little to go, but I am motivated to study and work on what I like to do.
